The power of SAP meets the freedom and simplicity of the iPad

INDUSTRY	Industrial, defense and workforce outsourcing
REVENUE	$2.2 billion
EMPLOYEES	24,000 worldwide
SOLUTION	procurementFreedom™ for iPad

THE CHALLENGE

Since the early 1900's, the company has built a reputation for meeting the more complex technical challenges of more than 1,300 commercial and government customers across the globe. The company's diverse range of industrial, defense and workforce outsourcing solutions have made it one of the most successful, privately-held businesses in the world.

But the increasing demands on the company's busy executive team – who are often traveling – were making it increasingly difficult for them to access SAP on the road to review and approve high-ticket purchase orders and requisitions needed to keep projects moving forward. Executives needed a fast, easy solution to access SAP, approve (*or reject*) documents while on-the-go, and quickly contact the appropriate manager to get any questions answered.

THE SOLUTION

The appsFreedom team designed and deployed its **procurementFreedom**™ solution for the Apple® iPad. The suite of apps are seamlessly integrated to the company's on-premise SAP system, and offer fast, real-time access to purchase orders, requisitions and other related documents.

The executives now have an icon on their iPad home screen that launches the app so they can review and manage the process from anywhere.

appsFreedom™
Driving Business Productivity

Deployed in just weeks, appsFreedom™ delivers easy access to SAP on the iPad for executives on the road. Now they have the freedom to easily manage high-ticket purchase orders from anywhere to keep projects moving forward and on time.

THE BUSINESS BENEFITS

Business Process Optimization

The iPad app allows execs to access SAP anytime, anywhere, helping to speed purchase order and requisition approvals to streamline a mission-critical component of the project workflow. Ultimately, process efficiencies get passed down the entire value chain.

Better User Experience

Executives no longer have to find an office and network-connected desktop computer in order to access the system and manage high-ticket requests. They also no longer need to navigate the complex SAP user interface, helping to reduce training and support costs.

Fast, Measurable ROI

The solution is designed and deployed in just weeks with a native iPad app. The solution is fully integrated with SAP for real-time, bi-directional access. Rapid deployment means fast ROI and low maintenance costs, both now and in the future.
